# Language learning tool

- Các công việc đã thực hiện, kết quả đạt được
- Các công việc dự định thực hiện
- Các khó khăn, thách thức gặp phải

## Chapter: Problem & App requirements

What the app does?
A language-learning tool that helps learners acquire grammar through a combination of comprehensible input and explicit grammatical structure through a document of their own interests, while allowing them to actively produce and receive corrective feedback.

Definition:

- implicit learning: exposure to lots of input and learning patterns intuitively
- explicit learning: studying grammar rules, conjugation tables, vocabulary lists, etc.

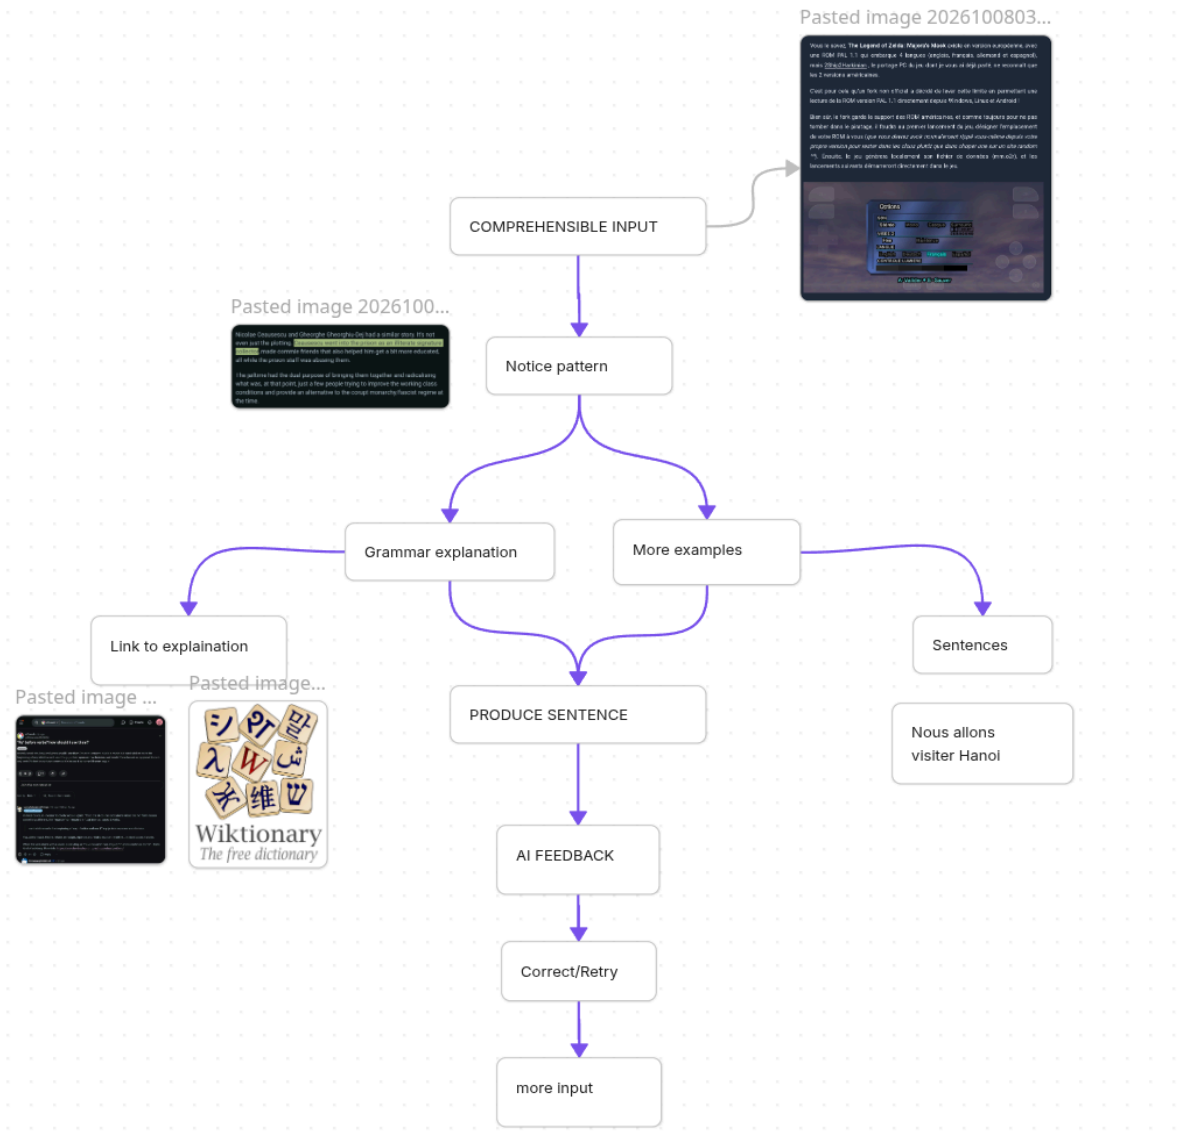

For example:
> aller + infinitif expresses the near future.

The system display examples that uses this grammar construct

- Nous allons visiter Hanoi.

and then demand a sentence from the user using the grammar construct

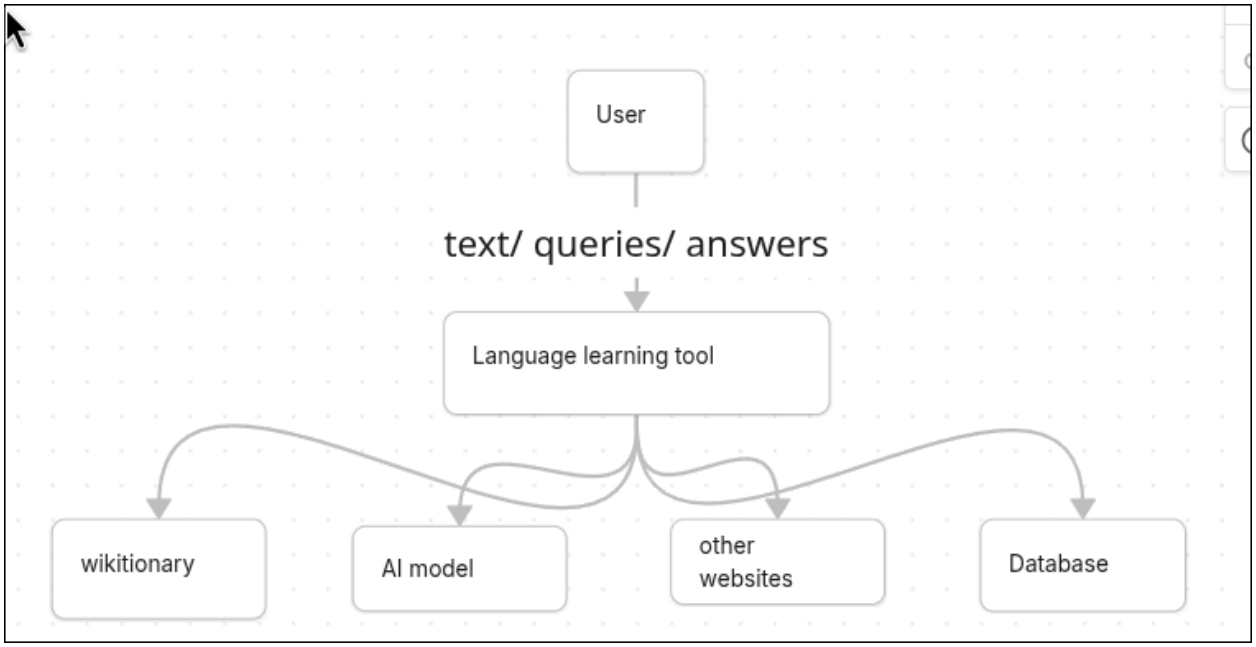

type [ Je vais visiter mon ami ]

# Objectives

1. Accept contextual language input: PDF, EPUB
2. Allow learners to inspect grammatical structures
3. Allow learners to produce their own sentences
4. Provide corrective feedback
5. Integrate dictionary/linguistic resources
6. Track vocabulary acquisition
7. Provide learner-controlled tools rather than a fixed course

# Chapter: Execution - Preliminary

Dataset

React/Svelte + FastAPI?

create chrome extension

# Chapter: Todo

UI design goals:

- minimal interface
- typography-focused
- low visual clutter
- muted color palette
- emphasis on text/content rather than gamification
- desktop-first interface
- easy keyboard and mouse interaction
